

ANANT SUTHAR

Pune, India | nntsuthar@gmail.com | github.com/anant720 | linkedin.com/in/anant-suthar-b5102a326

PROFESSIONAL SUMMARY

Cybersecurity-focused full-stack engineer with hands-on experience architecting and deploying real security systems — a 9-rule multi-tenant SOC telemetry platform, an AI-driven phishing detection engine achieving 93% classification accuracy across 510 test scenarios, and a suite of network security tooling. Proficient across the full stack from heuristic intrusion detection and LLM-based threat classification to real-time WebSocket pipelines and React dashboards. Actively participates in CTF competitions and security research.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, C, C++

Full-Stack Development: React 18 (Vite), Node.js, Express.js, Fastify, REST APIs, JWT / OAuth2 Authentication

Databases: PostgreSQL, MongoDB, Redis (session management, rate limiting)

Cybersecurity: Threat Detection, IDS Concepts, Secure API Design, Phishing Detection, Risk Scoring, AES-256-GCM, PBKDF2

Security Tools: Wireshark, Nmap, Netcat, Burp Suite, Kali Linux

DevOps & Monitoring: Docker, GitHub Actions, CI/CD, Linux, Nginx, Prometheus, Grafana

PROJECTS

Sentinel Security Platform | Node.js (Fastify) · React 18 · TypeScript · PostgreSQL · Redis · WebSockets · Docker | github.com/anant720/Sentinel

- Architected a 3-component multi-tenant SOC platform (ingest API, detection engine, React dashboard) with dual-protocol support — real-time WebSockets and HTTP fallback polling.
- Engineered a 9-rule heuristic detection engine targeting brute-force attempts, malicious scanner signatures (Nikto, Dirb), and authentication abuse; configurable per-tenant via admin UI.
- Structured granular RBAC across 3 access levels with secure JWT refresh token rotation and encrypted per-tenant API key management with rate-limiting controls.
- Automated the full deployment lifecycle via Docker and a GitHub Actions CI/CD pipeline, reducing manual deployment steps to 0 after initial environment setup.

AI Guardian Engine | Python · FastAPI · Groq Llama-3 · Google Gemini · ChromaDB · PostgreSQL · Redis · React 18 | github.com/anant720/AI-GUARDIAN | IdeaSpark Hackathon 2026

- Spearheaded a 4-person team to deliver a multi-layered phishing and scam detection platform combining 3 AI integrations (Llama-3, Gemini, ChromaDB) with rule-based NLP analysis.
- Achieved 93% classification accuracy across 510 labeled phishing and scam scenarios during internal testing, outperforming a 17% rule-only baseline by 76 percentage points.
- Deployed a 3-class output pipeline (Safe / Suspicious / Malicious) with dynamic risk scoring and ChromaDB vector similarity search for contextual threat matching.

SecurePass Analyzer | Python · zxcvbn · Have I Been Pwned API | github.com/anant720/SecurePass-Analyzer

- Developed a password security tool combining 4-level zxcvbn entropy scoring with 2 attack simulation modes — brute-force and dictionary — to quantify real-world credential risk.
- Integrated the Have I Been Pwned API to cross-reference submitted passwords against a database of over 600 million breached credentials in real time.

EDUCATION

B.Tech Computer Science (Cybersecurity Specialization) — MIT ADT University, Pune *Expected May 2028*

- JEE Main 2024: 96.4 Percentile (top 3.6% nationally across 1.2 million+ candidates)
- Relevant Coursework: Cybersecurity Essentials, Operating Systems, Data Structures & Algorithms, Computer Networks, Cryptography
- Cybersecurity and Blockchain Club — organized club's 1st online CTF; authored a 5-stage exploit chain challenge (SSRF → JWT alg confusion → IDOR → XXE → RCE).

CERTIFICATIONS & ACHIEVEMENTS

- Google Cybersecurity Professional Certificate — 9-course specialization covering threat detection, SIEM, Linux, and Python automation (Coursera)
- Google Cloud Computing Foundations — Google
- Object-Oriented Programming in Java — IBM
- Hackathons: Top finisher — IdeaSpark 2026 (AI Guardian, 4-person team lead); also competed in AI for Bharat and AMD Slingshot
- CTF: BSidesSF 2026, DawgCTF; active on LeetCode and HackerRank for algorithmic problem solving
